

Lab 1 - Introduction to Linux and Bash

211025 - My Name Goes Here

CY243-L - Penetration Testing Lab

Task - 1 - Creating files and folders

1. Create a new user called `kali-auto-user`, set its password to `test123`, and add it to the ``sudo`` group. Also, ensure that the home directory of this user is `/var/kali-auto-user`

→ Commands used:

```
<commands-go-in-block>
```

<Screenshot goes here>

2. Create a new group called ``kali-auto-group`` and add the ``kali-auto-user`` user to this group.

→ Commands used:

```
<commands-go-in-block>
```

<Screenshot goes here>

Task - 2 - Installing packages

1. Install the `git` package

→ Commands used:

```
<commands-go-in-block>
```

<Screenshot goes here>

2. Install the `curl` package

→ Commands used:

```
<commands-go-in-block>
```

<Screenshot goes here>

3. Using `curl`, download an image from the internet, add it's screenshot in the final report.

→ Commands used:

```
<commands-go-in-block>
```

<Screenshot goes here>

1. Using git, clone the following repository:

<https://github.com/theflash2k/CY243-L.git> and list the contents of the cloned repository (including hiddent files)

→ Commands used:

```
<commands-go-in-block>
```
